

RISHI MADHUR KANAJAM

Forward Deployed Engineer | AI Product & Full-Stack
Sydney | +61 466142205 | kanajamrishi@gmail.com | [LinkedIn](#) | [GitHub](#) | [Kaggle](#)

TECHNICAL SKILLS

AI / LLM Engineering: LLM agents, RAG, tool calling, evaluation & guardrails, prompt engineering; ship AI features end-to-end; Anthropic Claude, OpenAI, Gemini APIs, LangChain/LangGraph, Semantic Kernel

Languages & Backend: Python (primary), TypeScript/JavaScript, SQL, C++, FastAPI, Flask, Node.js/Express, PostgreSQL, MongoDB, REST APIs

Cloud & Delivery: AWS (Certified AI Practitioner), GCP (Vertex AI, Gemini, Firestore), Azure, Docker, GitHub Actions, CI/CD, Linux

Data & MLOps: End-to-end ML lifecycle, pipeline design, model versioning, monitoring; ETL/ELT, Spark, Airflow, Snowflake

Frontend: React, Next.js, Tailwind CSS, React Native

PROFESSIONAL EXPERIENCE

Academic Tutor, Data Structures & Algorithms, Intro to AI

01/2024 - Present

University of Sydney

- Guide 50+ students per semester through complex algorithmic concepts, building interactive HTML/React visualisations that turn abstract systems into shared mental models, the core skill of moving stakeholders from “problem” to “solution.”
- Run weekly labs, written feedback cycles, and 1-on-1 consultations; consistently rated for clarity and accessibility across undergraduate and postgraduate cohorts.

Systems Engineer - Data Team (Part-time)

04/2025 - 04/2026

St Vincent de Paul Society NSW (Vinnies)

- Built and supported data integration workflows across enterprise platforms (SAP, Workday), mapping fields, validating outputs, and documenting transformation logic to keep source-of-truth data consistent.
- Wrote Python automation and SQL to extract, transform, and consolidate data for reporting used by program, housing, and finance teams, scoping requirements directly with non-technical stakeholders.

Computer Vision Engineer (Industry Capstone, Team of 4)

08/2024 - 12/2024

Ocius Technology

- Member of a four-person team that delivered ~9× throughput improvement on a YOLOv8 maritime computer vision pipeline running on edge hardware; my workstream was model optimisation (quantisation, pruning, inference profiling).
- Hardened the inference path for production: deterministic outputs, monitoring hooks, and reproducible training runs, treating an AI model as a system to operate, not a demo.

Frontend Developer

04/2023 - 07/2023

HRVITE Services Pvt Ltd

- Re-engineered Angular UI components and interaction flows, improving usability and contributing to a measured ~15% increase in user retention
- Built data-driven UI components consuming REST APIs; implemented client-side data transformation and state management for complex nested HR datasets.
- Implemented front-end unit tests and participated in code reviews to reduce regressions and improve maintainability

Software Engineer Trainee

07/2022 - 01/2023

Revidd

- Built 15+ responsive interfaces with ReactJS integrated to REST APIs, contributing to a reported ~25% uplift in user engagement
- Operated in Agile teams (stand-ups, sprint planning) and led peer code reviews to accelerate delivery and knowledge transfer
- Contributed to backend data services and API development, handling data serialisation and transformation across system boundaries.

KEY PROJECTS

PathFinder - AI Triage & Referral Platform (NGM Group Hackathon, "Most Disruptive" award)

- Built an end-to-end AI triage/routing platform for a suicide-prevention network in 30 hours on Azure AI Services - dependency-free Python risk engine (Low/Medium/High), 24/7 voice/text intake chatbot, QR-code referral portal, and priority-queue admin dashboard with regional heatmap.
- Engineered for safety-critical reliability: static-HTML crisis fallback that survives backend outages, plus a five-layer cascading escalation protocol for unacknowledged high-risk contacts. Discovered the use cases from direct stakeholder interviews, not a spec.

DeceptionArena - LLM Evaluation Benchmark (Active)

- Designing and building a cross-game benchmark that evaluates LLM deception capability across social deduction games (Couple, Secret Hitler). Multi-provider agents compete in tournament play, surfacing differences in how models reason about deception, trust, and strategic ambiguity.
- Tournament ELO system, React + Pixi.js visualiser, structured evaluation outputs. The goal is a reproducible evaluation that captures behavioural differences between models, not just accuracy, but how models fail and why, targeting arXiv publication.

MedVault - Multimodal Clinical Decision Support | [link](#)

- Built an end-to-end multimodal AI agent that ingests clinical PDFs, images, and free-text notes via Gemini 1.5 Pro, with embedding-based retrieval grounding to cut fabricated citations, the same hallucination-control problem financial KYC and document handling demand.
- Designed a structured tool-use protocol so the model produces auditable outputs, citations, retrieval traces, and confidence flags, directly applicable to customer-facing AI in regulated, high-compliance workflows.

Krama Core - Open-Source Healthcare Infrastructure | [link](#)

- Founded and published Krama Core v0.1.0 to PyPI (pip install krama-core), a Python-first ABDM / FHIR R4 toolkit for India's last-mile healthcare interoperability.
- Shipped with production discipline: full CI/CD, security scanning, dependency hygiene, MIT licence, and 21 passing tests; three FHIR R4 bundle generators (OP Consult, Prescription, Discharge Summary).

OldTalkies - Telugu Cinema & Media Platform (Solo Founder) | [link](#)

- Designed and built the mobile app end-to-end: design system, editorial pipeline, music decomposition service, community/circles features, and a Marquee Briefs reading mode.
- Currently building the Next.js web platform to match the mobile app, targeting a public launch in September 2026.

EDUCATION

Master of IT & IT Management, Data Analytics & Management

University of Sydney

Bachelor of Technology (Honors), Computer Science and Engineering

GMR Institute of Technology

CERTIFICATIONS

- AWS Certified AI Practitioner - [AWS](#) (1bedf4d1017b450ebbbd31bcb452868f)
- McKinsey Forward Program (Apr–Jun 2026) - (business problem-solving, communication, leadership)
